MARCH, 2026

OVERVIEW & IDENTITY

01

1. Application Name & Tagline

App Name: Etcare

Tagline: Care that fits your life

Meaning: "ET" = Ethiopia's global code; "care" = compassionate health support. Together, it's a modern, trustworthy health platform designed to integrate seamlessly into users' daily routines.

Description: Etcare is a unified health platform that brings together essential services into one cohesive mobile experience.

2. Problem Statement

In Ethiopia, healthcare access remains fragmented and challenging. Patients face multiple barriers that Etcare is designed to overcome:

- ✔ **Inaccessible medical advice** – people often travel hours to reach a clinic; even urban residents face long wait times.
- ✔ **Poor chronic disease management** – patients with conditions like hypertension or diabetes frequently miss doses due to lack of reminders and follow up.
- ✔ **Unreliable health information** – people rely on word of mouth or unverified social media posts, risking misinformation.
- ✔ **No unified platform** – users juggle separate apps for pharmacy delivery, doctor consultations, and health tracking, or resort to phone calls and physical visits.

Result: These barriers result in delayed treatment, wasted resources, and preventable suffering. A holistic digital solution is urgently needed.

USER PERSONAS

02

3. Target User Personas

Samuel (22, Male)

He lives on a tight budget and often deals with stress, irregular sleep, and minor health issues like headaches or stomach upsets. He wants a reliable, all-in-one health app that can give him quick symptom guidance and credible wellness content. Etcare caters to his needs as a unified platform.

Bontu (28, Female)

Living in Addis Ababa, she speaks Afaan Oromo and suffers from recurring back pain. She wants remote healthcare advice and a doctor who can speak Afaan Oromo and explain her condition and medication in her own language. Etcare's telemedicine feature lets her filter doctors by language.

STRATEGY & SOLUTION

03

4. Proposed Solution

Etcare is a unified health platform for Ethiopia's unique context, offering seven core features that work together seamlessly:

AI Symptom Checker & Triage

Users answer a simple questionnaire (text/voice). The app suggests possible conditions, recommends whether to seek medical care, and offers self-care tips—reducing unnecessary clinic visits.

Telemedicine

Schedule video or audio consultations with licensed doctors. Receive digitally signed e-prescriptions stored in your profile, instantly usable for medication orders.

Health Library

Curated articles and videos in Amharic and English. Downloadable for offline viewing, ensuring access even with poor internet connectivity.

Medication Adherence

Set up schedules with push notifications. Users earn points or badges for adherence, redeemable for discounts on health products.

Personalized Wellness Plans

Receive custom diet, exercise, and medication plans based on goals, with daily check-ins and progress tracking.

EXECUTION ROADMAP

04

5. Core Features (MVP)

#	FEATURE	DESCRIPTION
1	**AI Symptom Checker**	Reliable first-line guidance via simple questionnaire to empower users and reduce clinic visits.
2	**Telemedicine & E-Prescription**	Bridging remote care with treatment by storing signed prescriptions for immediate medication orders.
3	**Health Library**	Maternal health, nutrition, and prevention info in Amharic/English accessible without internet.
4	**Medication Adherence**	Gamified push notifications and reward points to encourage consistent healthy habits.
5	**Personalized Wellness**	Sustainable custom health plans that adapt over time based on daily progress check-ins.

6. Team Members & Roles

ROLE	TEAM MEMBER
DATABASE & STATE LEAD	**Abel Yonas**
UI/UX IMPLEMENTATION LEAD	**Biftu Bojor**
CORE LOGIC & SERVICES LEAD	**Fuad Abdulkerim**
UI/UX IMPLEMENTATION LEAD	**Hiba Kassa**
NETWORK & API LEAD	**Yeabtsega Abera**
DEVOPS & TESTING LEAD	**Yeabtsega Girum**

7. Technical Stack (Planned)

Code Base **Android Java**	LOCAL STORAGE **SQLite & SharedPreferences**
NETWORKING **Retrofit**	AUTHENTICATION **Firebase Auth**
MAPS & LOCATION **Google Maps SDK**	NOTIFICATIONS **Local Notifications**
VERSION CONTROL **GitHub**	MANAGEMENT **Jira (Scrum)**

Etcare

Transforming healthcare access, one Ethiopian user at a time. This project represents our commitment to building production-ready, culturally relevant software.
